Design, life-long quality and endurance:

1. Tactile solutions are made of stainless steel or brass, which are highly resistant to erosion of pedestrian foot friction, both changes and fire. Accompanied by long warranty.
2. Meets the highest standards of slip resistance and accessibility regulations.

In-door & out-door solutions:

Stainless steel and brass tactile products could be installed in outdoor as well as in indoor premises, providing architect with better and more flexible design abilities.

Costs reduction:

1. No need for expensive infrastructure replacement.
2. Installation is conducted without interference to daily business operation of the public facility.
3. Maintenance-free products.

Return of Investment:

1. Highly accessible public places allow better human traffic, attract more visitors, and thus become more profitable.
2. Less infrastructure expenses.
3. No loss of business hours due to installation.
4. Maintenance-free.
5. Long warranty.
